

PROVOX ANNOUNCES VOXCOMPARISON™ AND VIVALOG PARTNERSHIP

ROANOKE, VA — November 23, 2006 – Provox, a leading provider of speech recognition based radiology reporting and medical documentation solutions, and Vivalog Technologies, a leading provider of knowledge management solutions for imaging, announce the availability of VoxComparison, a new tool added to the VoxReports solution that allows radiologists to easily search for comparative studies at the point of dictating a study. In partnership with Vivalog, Provox enables radiologists to improve diagnoses and reduce errors during the report creation process by providing a seamless way to query reference cases contained in Vivalog's decision support products, both MyPACS.net (an online repository of 55,000 key images in 13,000 reference cases) and MyPACS Enterprise, which contains cases created from a hospital's own image archives.

With a simple speech command or a press of a button, VoxComparison performs an intelligent query for reference cases on the web or in the hospital's local archives. A wide variety of search criteria can be utilized to refine the search for cases that best match the current study. Once a comparative study is located, the radiologist can utilize the power of VoxReports to quickly conduct the read and produce the report. This study can then be tagged and stored in the reference case repository for future comparative analysis or collaboration.

"Our partnership with Vivalog bring VoxReports in the next phase of radiology reporting – diagnostic reporting," says Steve Rothschild, CEO of Provox Technologies. "This is the first step in leveraging the radiology report repository to aid in the diagnostic process."

"The MyPACS-VoxReports integration greatly enhances both products," says Dr. Rex Jakobovits, President of Vivalog Technologies. "By providing seamless access to related cases directly from the reporting interface, customers will be able to make better diagnostic decisions faster."

About Provox Technologies:

Based in Roanoke, Virginia, Provox Technologies Corporation is the leading provider of speech recognition-based medical documentation and workflow management systems for group practices,

hospitals and clinics. The company's suite of award-winning products—including VoxEnterprise, VoxNotes, and VoxReports —interfaces with various practice management systems and EMRs, and can be customized for more than 33 medical specialty settings. For more information on Provox and its products, please visit www.provox.com or at RSNA Booth 5156 South Hall.

About Vivalog Technologies:

Vivalog Technologies is a leading provider of knowledge management software to hospitals and research institutions. Vivalog's web applications such as www.MyPACS.net are used by thousands of institutions around the world. Vivalog's core expertise is in applying the latest collaborative web technologies towards improving clinicians' ability to share and manage medical images to achieve just-in-time training at the point of care. MyPACS™ leverages the wealth of images in a hospital's own PACS and harnesses the collective expertise of their own faculty to provide on-demand decision support. Vivalog software empowers radiologists and other diagnostic imaging professionals to efficiently capture their knowledge as part of their daily practice, so it can be accessed wherever and whenever it is needed. The result is instant access to reference exams in the reading room, enhanced collaboration, communication, and rounds.
